

Zambia 40W solar energy

Overview

Zambia's largest solar plant, the Ngwenya Project, moves forward with \$30 million in financing from EAIF to boost renewable energy and power 40,000 homes. What are the key drivers behind this boom in the PV sector?

Zambia's recent boom in the PV (photovoltaic) sector can be attributed to the population search for alternative energy sources to light up their homes and power businesses. Zambia inaugurated a 20 MW solar photovoltaic plant in Lusaka to diversify its power mix amid climate-driven hydropower constraints. Kiyona Energy, a ZESCO subsidiary, developed the project and will allocate 2 MW directly to the Natural Resources Development College. The Project, which is being developed by ZESCO Limited, through its Zambia's Copperbelt Energy Corporation (CEC) expects to significantly expand the country's renewable- energy capacity, by adding a projected 800-MW-plus of solar energy to the national grid, by the end of 2027.
